

I'm a fullstack web developer with great interest in Javascript technologies like Angular, Vue and React, graphic designer also passionate about art and video games. I love backend development with Node, Python and C# and SQL Databases. I like to constantly explore and research technology and new practices, exchange knowledge in developer communities, learn more and do what I love giving my best in every project and work team. Always open to new ideas and assume the challenges that arise with the best disposition and learn from them.

Experience

Catasig (Nov 2022 - Jun 2023)

Full stack Developer

Fullstack Development and maintenance of a government applications for the land registry manager in the Colombian Catastro.
• Frontend and backend development for the Avaluo catastral Web application using Nextjs, React, Nodejs and Postgres SQL Databases.
• UI design and frontend development of Catasig website using Angular and Docker & Nginx for deployment.
• Frontend development and UI design for Catasig Geoserver using VueJs, Mapbox API for the map implementation and Backend development using Django and Docker with Postgres Databases.

Orusxpert SAS (Jan 2022 - Oct 2022)

Full stack Developer

Software development for the generation, edition and calculation of routes, with the purpose of simplifying and improving the routing process for the location of clients and commercial representatives in each area, for the company Ab-Inbev.
Functions performed:
• Frontend implementation based on mockups provided under the Figma tool for the interfaces using Angular as the main base of the project and integrating additional tools such as Google API, Material UI and PrimeNG for the interfaces.
• Backend development through the creation of Microservices using Python (Django) and Postgresql for the connection to the database.
• Software maintenance and deployment in Google Cloud, using Docker.

Mr Cake Store (Jun 2020 - Aug 2020)
